

Attorney Docket 61834-5028-US01  
Application No. 10/807,856  
Page 3

**Amendments to the Claims:**

This listing of claims will replace all prior versions and listing of claims in the application.  
Please amend claims 1 and 42 as follows.

**Listing of Claims:**

1. (Currently Amended) A method of identifying a polypeptide comprising a functional domain of interest comprising:

(a) contacting a multivalent recognition unit complex with a plurality of polypeptides from a cDNA expression library, in which the recognition units are peptides having in the range 6 to 60 amino acid residues and which selectively bind a domain of interest selected from the group consisting of GST, SH1, PH, PTB, LIM, armadillo, Notch/ankyrin repeat, zinc finger, leucine zipper, helix-turn-helix and helix-loop-helix; and

(b) identifying a polypeptide having a selective binding affinity for said recognition unit complex;

wherein the binding specificity of the recognition units has been decreased by incorporating said recognition units into said multivalent recognition unit complex.

2-41. Canceled

42. (Currently Amended) A method of identifying a polypeptide comprising a domain of interest, comprising:

(a) contacting a multivalent recognition unit complex, which complex comprises

- (i) avidin or streptavidin, and

- (ii) biotinylated recognition units, with a plurality of polypeptides from a cDNA expression library, in which the recognition units are peptides having in the range of 6 to 60 amino acid residues and which selectively bind a domain of interest selected from the group consisting of GST, SH1, PH, PTB, LIM, armadillo, Notch/ankyrin repeat, zinc finger, leucine zipper, helix-turn-helix and helix-loop-helix; and

(b) identifying a polypeptide having a selective binding affinity for said recognition unit complex;

wherein the binding specificity of the recognition units has been decreased by incorporating said recognition units into said multivalent recognition unit complex.

43-102. Canceled

103. (Previously Presented) The method of claim 1, wherein the multivalent recognition unit complex comprises a complex selected from the group consisting of: (a) biotinylated recognition units and avidin or streptavidin, (b) recognition units in the form of multiple antigenic peptides, or (c) recognition units cross-linked to a carrier protein.

104. (Previously Presented) The method of any one of claim 1, 42, or 103 in which of polypeptides is obtained from a virus.

105. (Previously Presented) The method of any one of claim 1, 42, or 103 in which said expression library is a recombinant bacteriophage library.

106. (Previously Presented) The method of claim 105 in which said expression library is a recombinant M13 library.

107. (Previously Presented) The method of any one of claim 1, 42, or 103 in which said expression library is a recombinant plasmid or cosmid library.

108. (Previously Presented) The method of any one of claim 1, 42, or 103 in which said recognition unit is a peptide having 20 to 50 amino acid residues.

109. (Previously Presented) The method of claim 1 or claim 103 in which the valency of the recognition unit in the complex is at least four.
